Information Regarding Novel Coronavirus

“CDC is responding to an outbreak of respiratory disease caused by a novel (new) coronavirus that was first detected in China and which has now been detected in more than 100 locations internationally, including in the United States. The virus has been named “SARS-CoV-2” and the disease it causes has been named “coronavirus disease 2019” (abbreviated COVID-19).

On January 30, 2020, the International Health Regulations Emergency Committee of the World Health Organization declared the outbreak a “public health emergency of international concern” (PHEIC). On January 31, 2020, Health and Human Services Secretary Alex M. Azar II declared a public health emergency (PHE) for the United States to aid the nation’s healthcare community in responding to COVID-19.”

Common indications of infection include respiratory symptoms, cough, fever, shortness of breath, and breathing difficulties. Recommendations by the World Health Organization (WHO) to prevent infection include hand washing, covering the mouth and nose when coughing and sneezing, and thoroughly cooking meat and eggs. Avoiding close contact with anyone showing symptoms such as coughing and sneezing is also recommended.

COVID-19 is thought to mainly be spread by person-to-person contact (within 6 feet) or contact with respiratory droplets produced when a person coughs or sneezes. While it is not clear yet how COVID-19 is predominantly being spread, evidence suggests that many viruses can be transmitted through hard surfaces with the virus on it. (Centers for Disease Control and Prevention, 2020)

Top Product Innovations’ Phenomenal Aire™ products have been proven through independent lab testing to reduce pathogens similar to SARS-CoV-2 in residential and commercial applications.

Viruses are reduced on hard non-porous surfaces and in the indoor air.
